

$$T + M \cdot \frac{1}{2} - M_{1} \cdot M \cdot \frac{13}{2} = M \cdot \alpha$$

$$M \left( \frac{8}{2} - M_{1} \cdot 9 \cdot \frac{13}{2} - \alpha \right) = -T$$

$$M = \frac{T}{\alpha + M_{1} \cdot 9 \cdot \frac{13}{2} - \frac{8}{2}} = \frac{40,02}{5,2 + 0,05 \cdot 4,303 - 4,3}$$
