DEFINIZIONE: PRIMITIVA & ANTIDERIVATA

Sie f: I - R, I intervallo. Si diane PRIMITIVA di l in I agni sursione F derivable in I tale che

$$F'(x) = f(x) \quad \forall x \in I$$

TH. DERIVATA NULLA

f: I -> IR folemolile in I _ f(x) = COSTANTE IN I I internall f'(x)=0 Vx EI

Se Fe G sons due primitive di l in I:

$$[f(x) - G(x)]' = f'(x) - G'(x) = f(x) - f(x) = 0 \quad \forall x \in I$$

TEOREMINO

I: I → IR I internals

• Fe me prinitive di f => F+C e me prinitive di f

• F, G prinitive di f => FCER: F=G+C

 $F(x) = G(x) + c \quad \forall x \in I$

IN PARTIGLARE $\int f'(x) dx = f(x) + c$ Brollie $\int f(x) dx = F(x) + c \quad con F'(x) = f(x)$ $\left[\int_{\mathbb{R}} f(x) dx\right] = f'(x) = f(x)$ In quests seus (impreciss!) si dice che l'integrasione indefinita e le derivazione sons operazioni inverse. LINEARITA DI TEOREMA $\int [f(x) + g(x)] dx = \int f(x) dx + \int g(x) dx$ $C \in \mathbb{R}$ $\int c f(x) dx = c \int f(x) dx$ NON VALE!!! $\int f(x) \cdot g(x) dx = \int f(x) dx \int \int g(x) dx$
