L'unice controinnagine de 7 è -3

Dato la funsione f: D→R, dato A⊆R, l'insieme contras (AVMAQUE di A é il sottoinneme di D che contiene tutte le controinmegini degli elementi di A. Si denota con f⁻¹(A)

$$\int_{\mathcal{P}(A)}^{-1} (A) = \left\{ \times \in D \mid \mathcal{L}(\times) \in A \right\}$$

Nel note cos
$$f^{-1}(\{-\frac{1}{2}\}) = \{-\frac{1}{2}\}$$
 $f^{-1}(\{7\}) = \{-3\}$
