

Due cariche identiche $Q = 3.0 \times 10^{-10}$ C si respingono con una forza di intensità $F = 2.4 \times 10^{-3} \text{ N}$.

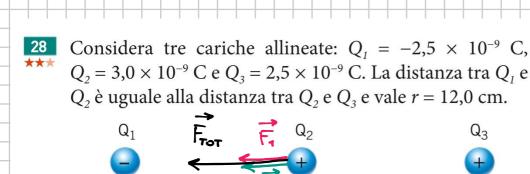

▶ Calcola la distanza tra le due cariche.

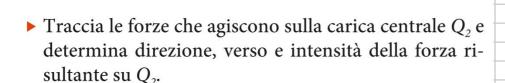

$$[5.8 \times 10^{-4} \,\mathrm{m}]$$

$$F = k_0 \frac{Q^2}{R^2} \implies R^2 = k_0 \frac{Q^2}{F}$$

$$= \sqrt{\frac{k_0}{F}} \frac{Q}{F}$$

$$= \sqrt{\frac{8,388 \times 10^9}{2,4 \times 10^{-3}}} \frac{3,0 \times 10^{-10}}{M} = \sqrt{\frac{8,388}{2,4}} \frac{3,0 \times 10^{-4}}{M} = \frac{5,8 \times 10^{-4}}{M} = \frac{5,8 \times 56 ... \times 10^{-4}}{M} \approx \frac{5,8 \times 10^{-4}}{M} = \frac{5,8 \times 10^{-4}}{M}$$

F₁ = K₀ |Q₁||Q₂| F₂ = K₀ |Q₃||Q₂| F₃ = F₄ = F

From = F1 + F3

$$F_{TOT} = F_1 + F_3 = 2F_1 = 2K_0 \frac{|Q_1||Q_2|}{n^2} = \frac{1}{n^2}$$

$$= 2 \left(8,988 \times 10^{9} \text{ N·m}^{2}\right) \left(2,5\right) \left(3,0\right) \times 10^{-18} \text{ C}^{2}$$

$$= 2 \left(8,988 \times 10^{9} \text{ N·m}^{2}\right) \left(2,5\right) \left(3,0\right) \times 10^{-4} \text{ m}^{2}$$

$$= \left(12,0\right) \times 10^{-4} \text{ m}^{2}$$
